

Audina® Hearing Instruments, Inc. was established in 1990 with a dedicated team of skilled individuals sharing a common vision - to build and distribute the finest products, while offering outstanding service with integrity and value. Today, Audina's associates continue to share that same commitment to designing and building state-of-the-art custom hearing instruments. Many of Audina's engineering, technical and sales associates have over 25 years of experience in the hearing industry. Our team is devoted to improving the quality of life for every person who wears an Audina hearing instrument.

- Privately owned American company
- Advanced technology
- Comprehensive product line to accommodate all hearing loss needs
- International reputation - exporting to over 30 countries
- Recognized as a hearing industry leader
- Legendary customer service
- ISO Certified, 9001, 13485, CE

In this day of corporate conglomerates, Audina takes pride in maintaining its independence. An American privately-owned and operated company, Audina has established itself as a truly global organization with loyal and satisfied clients on every continent.

By maintaining ISO certification, Audina is demonstrating its commitment to our four measurable quality objectives: Quality, Delivery, Continual Improvement, and Committed Quality Suppliers. Our clients can be assured that Audina is an organization that is committed to providing them with products that meet the highest quality standards; built by highly skilled and trained professional personnel.

HEARING INSTRUMENTS, INC.

SPARO

Two of the most common statements from individuals who wear hearing instruments are “I feel plugged-up and don't like the sound of my own voice” and “if only there was a way to eliminate the whistling (feedback) noise”.

Whether you are a first-time user or replacing an existing hearing instrument - you are making a decision to improve the quality of your life. The SPARO, our over-the-ear, open fitting instrument provides solutions to these concerns. With adaptive feedback reduction, the whistling or feedback is automatically eliminated without affecting the sound quality of what you really want to hear. Advanced technology utilizing an ear bud and allowing the ear canal to be open offers brilliant digital clarity without the plugged-up feeling.

Actual Size

Here's what you will see

FEATURES

- Automatically eliminates the feedback (whistling) noise without affecting what you want to hear.
- Achieves an extremely high level of performance at one of the lowest battery consumption levels in the hearing industry!
- Reduces annoyance and fatigue of background noise while giving clarity and low distortion to speech input, resulting in a full and clear speech production.
- Adapts to different listening situations such as dining in a restaurant, participating at a place of worship, or enjoying a party.
- Responds to background noise of all intensities, allowing the clear, crisp sound you want to hear come through without generating distortion.

The SPARO is nearly invisible - perfect for those who don't want others to notice they are wearing a hearing instrument. Although, others will notice when you're no longer asking them to repeat themselves!

Why Two Hearing Instruments are Better than One:

Patients sometimes ask why their hearing healthcare professional recommends two hearing instruments rather than one. If you have a hearing loss in both ears, you are most likely a candidate for two hearing aids. Similar to the way refractory problems in both eyes are treated with a pair of glasses, it makes sense that bilateral hearing loss should be treated with binaural hearing aids. While a hearing healthcare provider can best determine if you are a candidate for two instruments, the ultimate decision is yours.

Consider these important advantages of a binaural (two ear) fitting:

- A more natural, “stereo sound” and an overall balanced feeling
- Improved ability to identify the direction of the sound, which is crucial for safety
- Hearing is less tiring and listening is more pleasant
- Increased ability to understand speech in normal conditions and noisy situations
- Less volume needed, which reduces the interference of background noise and the chance of feedback
- Keeps both ears active, reducing the chance of the unaided ear losing its ability to hear or understand
- Greater comfort when loud noises occur
- Smoother tone quality and improved clarity
